

Notifiable Infectious Diseases Reports

Reported Cases and Deaths of National Notifiable Infectious Diseases — China, September 2024*

Diseases	Cases	Deaths
Plague	0	0
Cholera	1	0
SARS-CoV	0	0
Acquired immune deficiency syndrome [†]	4,450	1,720
Hepatitis	146,669	332
Hepatitis A	1,084	0
Hepatitis B	125,765	29
Hepatitis C	16,896	303
Hepatitis D	7	0
Hepatitis E	2,446	0
Other hepatitis	471	0
Poliomyelitis	0	0
Human infection with H5N1 virus	0	0
Measles	118	0
Epidemic hemorrhagic fever	192	1
Rabies	17	12
Japanese encephalitis	71	0
Dengue	4,845	0
Anthrax	90	1
Dysentery	3,564	0
Tuberculosis	55,609	247
Typhoid fever and paratyphoid fever	612	0
Meningococcal meningitis	5	0
Pertussis	17,316	2
Diphtheria	0	0
Neonatal tetanus	2	0
Scarlet fever	2,179	0
Brucellosis	4,612	1
Gonorrhea	8,923	0
Syphilis	54,136	3
Leptospirosis	128	0
Schistosomiasis	0	0
Malaria	242	0
Human infection with H7N9 virus	0	0
Monkey pox [§]	46	0
Influenza	117,403	0
Mumps	9,657	0

Diseases	Cases	Deaths
Rubella	39	0
Acute hemorrhagic conjunctivitis	2,156	0
Leprosy	10	0
Typhus	188	0
Kala azar	33	0
Echinococcosis	407	2
Filariasis	0	0
Infectious diarrhea [¶]	121,176	0
Hand, foot and mouth disease	35,054	0
Total	58,9950	2,321

* According to the National Bureau of Disease Control and Prevention, not included coronavirus disease 2019 (COVID-19).

[†] The number of deaths of acquired immune deficiency syndrome (AIDS) is the number of all-cause deaths reported in the month by cumulative reported AIDS patients.

[§] Since September 20, 2023, Monkey pox was included in the management of Class B infectious diseases.

[¶] Infectious diarrhea excludes cholera, dysentery, typhoid fever and paratyphoid fever.

The number of cases and cause-specific deaths refer to data recorded in National Notifiable Disease Reporting System in China, which includes both clinically-diagnosed cases and laboratory-confirmed cases. Only reported cases of the 31 provincial-level administrative divisions in the Chinese mainland are included in the table, whereas data of Hong Kong Special Administrative Region, Macau Special Administrative Region, and Taiwan, China are not included. Monthly statistics are calculated without annual verification, which were usually conducted in February of the next year for de-duplication and verification of reported cases in annual statistics. Therefore, 12-month cases could not be added together directly to calculate the cumulative cases because the individual information might be verified via National Notifiable Disease Reporting System according to information verification or field investigations by local CDCs.
